international journal of
fracture

*Vol. 93, Nos. 1–4, 1998*

*Special Issue*

**Recent Advances in Fracture Mechanics**

Edited by W.G. Knauss and R.A. Schapery

**TABLE OF CONTENTS**

| | | |
|---|---|---|
| Publisher's Foreword | | vii |
| Dedication to Mel and Max Williams | | ix–x |
| Foreword | | xi–xiii |
| Crack expanding with constant velocity in an anisotropic solid under antiplane strain | K.B. BROBERG | 1–12 |
| Numerical analysis of dynamic debonding under 2D in-plane and 3D loading | M. SCOT BREITENFELD and PHILIPPE H. GEUBELLE | 13–37 |
| Dynamic ductile fracture of aluminum SEN specimens an experimental-numerical analysis | JONGHEE LEE, MATTHEW T. KOKALY and ALBERT S. KOBAYASHI | 39–50 |
| Transient effects during rapid crack propagation | J.G. WILLIAMS | 51–61 |
| Crack detection by the electric method: Uniqueness and approximation | DANG DINH ANG and DANG DUC TRONG | 63–86 |
| Singularity-reduced integral equations for displacement discontinuities in three-dimensional linear elastic media | SONGSHAN LI and MARK E. MEAR | 87–114 |
| A single-domain dual-boundary-element formulation incorporating a cohesive zone model for elastostatic cracks | B. YANG and K. RAVI-CHANDAR | 115–144 |

| | | |
|---|---|---|
| Nonsteady crack and craze behavior in PMMA under cyclical loading: I. Experimental preliminaries | GUILLERMO C. PULOS and WOLFGANG G. KNAUSS | 145–159 |
| Nonsteady crack and craze behavior in PMMA under cyclical loading: II. Effect of load history on growth rate and fracture morphology | GUILLERMO C. PULOS and WOLFGANG G. KNAUSS | 161–185 |
| Nonsteady crack and craze behavior in PMMA under cyclical loading. III. Effect of load history on cohesive force distribution on the craze | GUILLERMO C. PULOS and WOLFGANG G. KNAUSS | 187–207 |
| Crack growth behavior in an epoxy strip above and below $T_g$ | KAZUO OGAWA, AKIHORO MISAWA and MASAHISA TAKASHI | 209–226 |
| On the fracture of constrained layers | C.H. WANG | 227–246 |
| Fracture size effects and polycrystalline inhomogeneity | KHALED ABDEL-TAWAB and GREGORY J. RODIN | 247–259 |
| A dislocation barrier model for fatigue crack growth threshold | H.W. LIU | 261–280 |
| A calibrated fracture process zone model for thin film blistering | A. SHIRANI and K.M. LIECHTI | 281–314 |
| Interface strength, work of adhesion and plasticity in the peel test | YUEGUANG WEI and JOHN W. HUTCHINSON | 315–333 |
| Predicting crack initiation in composite material systems due to a thermal expansion mismatch | E.S. FOLIAS, M. HOHN and T. NICHOLAS | 335–349 |
| Role of controlled debonding along fiber/matrix interfaces in the strength and toughness of metal matrix composites | A.S. ARGON, M.L. SELEZNEV, C.F. SHIH and X.H. LIU | 351–371 |
| Analysis of sharp angular notches in anisotropic materials | C. BLANCO, J.M. MARTÍNEZ-ESNAOLA and C. ATKINSON | 373–386 |
| Kinked cracks in anisotropic elastic materials | C. BLANCO, J.M. MARTÍNEZ-ESNAOLA and C. ATKINSON | 387–407 |

Williams meets von Karman: Mode coupling and nonlinearity in the fracture of thin plates — CHUNG-YUEN HUI, ALAN T. ZEHNDER and YOGESH K. POTDAR — 409–429

Author index — 431
